

ROTATING MAGNETIC FIELD ON FUEL QUALITY

- Devyansh Agarhari, Hrishabh Singh (IMU)

OBJECTIVE:

To verify nominal improvement in the fuel quality (Flash point & Viscosity) by subjecting the oil samples to strong rotating magnetic field.

PRINCIPLE/CONCEPT:

Magnetic field is known to be associated with flowing charges. The hydrocarbon molecules in motion, however minutely charged, are anticipated to re-orient, when subjected to a magnetic field. When a strong rotating magnetic field is applied to a fuel sample, it is hypothesized that the weak bonds between complex molecules are broken and shorter molecular chains are formed. This can improve the fuel oil quality and the improvement can be observed by noting the changes in the fuel oil flash point and viscosity before and after a sample oil is subjected to a rotating magnetic field.

Test Equipment: Stator (of a motor) for magnetic field creation, heavy fuel oil, plastic jar and wooden stirrer, Redwood viscotherm machine, Pensky-Martens Flash Point Apparatus.

The fuel oil used was furnace oil of viscosity 180 cst.

Specifications of induction motor (stator) used for the experiment:

Power: 2 HP; Voltage rating: 318/440 volts; Frequency: 50 Hz

DESCRIPTION OF OPERATION:

Stator was operated at 25% of its rated voltage to avoid burning and overheating of coil. Fuel was placed in a plastic jar with a wooden stick (to stir the fuel oil) and was placed on the rotor (inside the stator space). It was placed for fifteen minutes in the rotating magnetic field with continuous stirring of fuel with the help of the wooden stick. Then it was stored in water tight bottles and further tests were carried out.

Figure 1 Filter Paper Blots of N.T.F (untreated fuel) and T.F (treated fuel) filter paper

Figure 5 Motor Stator and Rotor

Figure 4 Motor Data

TESTS WERE CARRIED OUT AS FOLLOWS:

1. Filter paper test:

Drops of 'treated fuel' (undergone magnetic field effects) and untreated fuel (not undergone magnetic field effects) were placed on filter papers using a dropper and the samples were kept at normal room temperature without any disturbances (wind, heat etc.) for 24 hours. Later, observations were made.

2. Flash point test:

Flash point tests for both 'treated' and 'untreated' fuel samples were conducted with the help of semi-

Figure 2 Semi-automatic Pensky-Martens Flash Point Apparatus

Figure 3 Redwood viscotherm machine

automatic Pensky-Martens flash point apparatus.

3. Viscosity test:

Viscosity tests were conducted for both 'treated' and 'untreated' fuel samples with the help of Redwood viscotherm machine at a temperature of 50 deg. Celsius.

The tests were carried out several times and average values were taken.

RESULTS & OBSERVATIONS:

Data extracted from test number 1:

The 'treated' fuel caused a smaller blot on filter paper than the 'untreated' fuel for equal drop of fuel on two different filter papers.

Data extracted from test number 2:

The 'untreated' fuel indicated a flash point of 125 deg. Celsius and the treated fuel indicated a flash point of 72 deg. Celsius.

Data extracted from test number 3:

A viscosity difference of 1 cst was observed between treated and untreated fuel.

CONCLUSION/INFERENCE:

We have observed significant decrease in flash point and viscosity. The filter paper test indicated that the fuel oil composition is more uniform after treatment. It may be assumed that the treated fuel could perform better.

SCOPE FOR FURTHER STUDIES

The tests can be carried out with increased magnetic intensity on a variety of fuels including Biofuels. The 'treated' fuels can be used on engines and compared with the performance of regular, 'untreated' fuels.

PROJECT SUPPORT/SPONSOR:

Eswara Arun Kishore, Associate Professor, Indian Maritime University, Kolkata Campus (erstwhile DMET-MERICALCUTTA)

PROJECT PARTICIPANTS:

1. Devyansh Agarhari (IMU Reg. no. 1601608081) 2. Hrishabh Singh (IMU Reg. no. 1601608099)

COMPETENCY COURSES	COMMENCEMENT	FEES
MEO Class I – Preparatory course	1st of every month	Rs. 30000
MEO Class II – Preparatory course	1st of every month	Rs. 38000
MEO Class IV – Preparatory course (Non DG)	1st of every month	Rs. 10000
2 ND Mate (FG) Function course	15th Feb, 15th June, 15th Oct	Rs. 33000
Chief Mate (FG) – Phase 1 Course	15th of Mar, June, Sept, & Dec	Rs. 41000
Chief Mate (FG) – Phase 2 Course	15 th of Jan, Apr, July, & Oct	Rs. 46000
Advanced Shipboard Management course	1st of Jan, March, May, July, Sep, & Nov	Rs. 30000

SPECIALIZED VALUE-ADDED COURSES	FEES
MAN B&W - ME Engines - Operation and Analysis Course: 5 days – Every 3 rd Monday of the month	Rs. 35000
Engine Room Resource Management (ERRM) - 3 days	Rs. 15000
Bridge Resource Management (BRM) – 3 days	Rs. 15000
Hydraulic Breakdown Management Workshop : 2 days	Rs. 15000

7 Compelling reasons to prefer MASSA Academy, Chennai.

- Promoted by Industry Association - dedicated service to the industry.
- Proven track record of many years
- Best in class faculty – committed and professional.
- Excellent location on beginning of IT road.
- Accommodation tie-up with decent guest houses close-by.
- Highly subsidized fee structure inclusive of food.

MODULAR/SIMULATOR COURSES	COMMENCEMENT	FEES
Diesel engine combustion gas monitor simulator	1 st & 3 rd Monday of every month	Rs. 10000
Engine Room Simulator – Management level	2 nd & 4 th Monday of every month	Rs. 10000
Engine Room Simulator – Operational level	1 st & 3 rd Thursday of every month	Rs. 5000
Radar Observers Simulator course (ROSC)	3 rd week of Jan, Mar, May, Jul, Sep, Nov	Rs. 8000
Automatic Radar Plotting Aid Simulator course	3 rd week of Feb, Apr, Jun, Aug, Oct, Dec	Rs. 5000
RADAR, ARPA, Navigation Simulator course	4 th week of Feb, Apr, Jun, Aug, Oct, Dec	Rs. 10000
Ship manoeuvring simulator & Bridge teamwork	Every Monday	Rs. 16000
Liquid cargo handling Simulator course (Oil)	Every Monday	Rs. 10000
MEO Refresher & Upgrade Course (3 days)	3 rd Monday of every month	Rs. 7000
High voltage Safety (Management level)	1 st Monday of every month	Rs. 15000
High voltage Safety (Operations level)	1 st Monday of every month	Rs. 3000
Medical Care Course	3 rd week of Feb, Apr, Oct,	Rs. 10000
Medical First Aid Course	3 rd week of Jun, Aug, Dec	Rs. 5000
Ship Security Course	3 rd week of every month	Rs. 5000
Train the Simulator Trainer & Assessor (TSTA)	2 nd & 4 th week of every month	Rs. 24000
Assessment, Examination, Certification of Seafarers Course (AECS)	1 st Two weeks of every month	Rs. 30000

DNV-GL COURSES	FEES
Internal Auditor for ISM/ISPS/MLC	Rs. 20000
Designated Person Ashore	Rs. 20000
Practical Incident Investigation & Root Cause Analysis	Rs. 20000
Practical Marine Risk Assessment Workshop	Rs. 20000
Internal Auditor for QMS/EMS/OHSMS/ENERGY MGMT.	Rs. 33000
Company Security Officer Course	Rs. 25000
Vetting Inspection	Rs. 20000
Marine- Systematic Cause Analysis Technique (M-SCAT)	Rs. 10000
Navigational Audits	Rs. 10000
